EDBERTO TOSOY

FULL-STACK / BACKEND SOFTWARE ENGINEER

Metro Manila, Philippines | edberto@edtosoy.com | +63 960 822 3122
edtosoy.com | github.com/EdTosoy | linkedin.com/in/edtosoy

PROFESSIONAL SUMMARY

Full-stack software engineer with production React and TypeScript experience in banking. Builds full-stack and backend applications using Next.js, Node.js, Python, FastAPI, and PostgreSQL. Focused on end-to-end product engineering, building secure, maintainable, reliable, and scalable software through automated testing and modern development practices.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, SQL, Bash
Frontend: React, Next.js, Angular, Tailwind CSS, TanStack Query, Zustand, React Hook Form
Backend: Node.js, NestJS, Express, FastAPI, RabbitMQ, REST APIs, WebSockets, background workers
Database & Security: PostgreSQL, MongoDB, Prisma, Drizzle ORM, SQLAlchemy, JWT, RBAC, Better Auth
Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, GitHub Actions, Cloudflare, Vercel, Prometheus, Grafana
Systems & Tools: Linux, NixOS, Git, Neovim, tmux, pnpm, Nx
AI & Integrations: OpenAI API, LangChain, MCP, RAG, n8n, Stripe API/webhooks
Testing: Vitest, Jest, Pytest, Playwright, Cypress, integration and end-to-end testing

PROFESSIONAL EXPERIENCE

CTO Apprentice | toraru co., ltd. September 10, 2026 – Present

- Conduct competitor and technology research for the company's remote-presence and on-site services platform, evaluating market offerings and technical approaches.
- Support product strategy, competitive analysis, and product positioning through research and preparation of accelerator applications.

Software Engineer | Metrobank (via 98Labs Inc.) *February 2021 – July 2022*

- Developed and maintained React/TypeScript interfaces for production teller and administrative banking workflows, integrating REST APIs, Redux, and Ant Design.
- Built complex transaction forms, investigated defects, and maintained Cypress end-to-end regression coverage.
- Collaborated with QA engineers, business analysts, and developers on requirements, debugging, and code reviews.
- Refactored foreign-exchange charge and form-state logic, reducing a component from ~1,600 to 700+ lines.

SELECTED ENGINEERING PROJECTS

Vigil | Financial Reconciliation & Exception Management

TypeScript, Node.js, PostgreSQL, Next.js, Stripe, AWS ECS Fargate, RDS, Terraform

- Built exact-integer money handling, immutable financial evidence, deterministic 1:1 and N:1 reconciliation, exception controls, and idempotent recoverable workers.
- Verified signed Stripe sandbox event ingestion and PostgreSQL integration tests; deployed and tore down an HTTPS AWS demo using ECS Fargate, private RDS, and Terraform.

FATS | Job Application Management Platform

Next.js, TypeScript, PostgreSQL, Better Auth, Playwright, PDF.js, pdf-lib

- Built application/interview tracking, account-scoped document workflows, and a Chrome extension for user-reviewed job capture.
- Implemented authentication, authorization, PDF editing/extraction/splitting, and automated integration and browser tests.

abox | Hospital Management Platform

Next.js, NestJS, PostgreSQL, Drizzle ORM, Docker, Kubernetes, Terraform

- Built patient, appointment, consultation, queue, and billing workflows backed by a NestJS API and PostgreSQL.
- Implemented role/ownership checks, transaction-safe queue handling, and migration/test workflows; configured Docker, Kubernetes, and Terraform infrastructure.

EDUCATION & CERTIFICATION

B.S. Information Technology | FEU Roosevelt Marikina | June 2025
AWS Certified AI Practitioner | Earned September 2026 | Expires September 29, 2029
