PROFESSIONAL SUMMARY

Software engineer with production React and TypeScript banking experience at Metrobank via 98Labs. Builds independent full-stack and backend systems with Node.js, Next.js, PostgreSQL, Python, and AWS, emphasizing financial correctness and verifiable engineering decisions.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL
Frontend: React, Next.js, Redux, Ant Design, React Hook Form, SCSS
Backend & Data: Node.js, NestJS, FastAPI, REST APIs, PostgreSQL, database transactions
Testing & Infrastructure: Cypress, Vitest, Playwright, Git, Docker, AWS, Terraform, GitHub Actions

PROFESSIONAL EXPERIENCE

Software Engineer — Metrobank (via 98Labs Inc.)
February 2021 – July 2022

- Developed React and TypeScript interfaces for production teller and administrative banking workflows, integrating REST APIs with Redux and Ant Design.
- Built forms with React Hook Form and SCSS; investigated production defects across application logic and user workflows.
- Maintained Cypress end-to-end tests for critical banking workflows and regression scenarios.
- Collaborated with QA engineers, business analysts, and developers on requirements, debugging, code reviews, and delivery.
- Consolidated FX transaction charge logic and form-state handling, reducing the component from approximately 1,600 to just over 700 lines of code.

SELECTED INDEPENDENT ENGINEERING PROJECTS

Flow — Financial Reconciliation System
TypeScript, Node.js, PostgreSQL, Next.js · Technical evidence · Repository

- Implemented exact-integer money, an immutable double-entry ledger, deterministic reconciliation, and recoverable worker processing to make financial discrepancies explainable.
- Built a read-only Next.js investigation interface using bounded PostgreSQL reads. Selected integration tests passed with synthetic data; local evidence does not establish a live deployment or production readiness.

FATS — PDF Tools
Next.js, React, TypeScript, PDF.js, pdf-lib · Technical evidence · Repository

- Built local PDF processing with stable page identity, edit history, signature placement, extraction, splitting, and export-reopening checks within a job-search platform.
- Kept v2 development-only. Independent Poppler checks verify selected synthetic exports; one source-hash assertion and five browser-overlay checks remain failing in the recorded broader runs.

EDUCATION

FEU Roosevelt Marikina — Bachelor of Science in Information Technology · June 2025

CERTIFICATION

AWS Certified AI Practitioner — Amazon Web Services Training and Certification
Earned September 2026 · Expires September 29, 2029 · Verify on Credly
